IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Claims and Claim Objections

Independent claims 4 and 17 are amended. Objections to claims are withdrawn.

Election/Restrictions

This application is in condition for allowance except for the presence of claims 11, 19, and 35-42 directed to species non-elected without traverse. Accordingly, claims 11, 19, and 35-42 have been cancelled.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 11, 19, and 35-42 are canceled.

The second paragraph of the Abstract is merged with the first paragraph to form a single-paragraph Abstract, as is required.

Claim Rejections - 35 USC § 112

Rejections under 35 USC § 112 are withdrawn.

Allowable Subject Matter

Claims 2-4, 7-10, 12-18, 21-22, and 27-34 are allowed.

The following is an examiner's statement of reasons for allowance:

A thorough search of relevant prior art of record did not disclose, alone or in combination, an in-plane switching liquid crystal display device as claimed comprising: an auxiliary common line connected with the plurality of common electrodes, the auxiliary common line covering the common line such that the auxiliary common line contacts side and top surfaces of the common line.

The closest combination of prior art is Applicant's admitted prior art (APA) in view of Jeon et al (Jeon) USPAT 6,362,858 B1, Wakagi et al (Wakagi) USPAT 6,300,995 B1, and further in view of Ando et al (Ando) USPAT 6,356,330 B1.

As to independent claims 4 and 17, APA discloses in Figure 8 an in-plane switching liquid crystal display (LCD) device comprising: common electrodes, 54a, alternating and parallel with pixel electrodes, 66a, and a gate line, 50, for a TFT and a common line, 54, wherein common electrodes are arranged to directly contact the common line and second ends of the finger portions of the common electrodes are connected to each other [dotted line portion in Figure 8]; and a first connecting line, 66, parallel to the gate line, wherein the plurality of pixel electrodes are perpendicular to the first connecting line, first ends of the pixel electrodes are connected to the first

connecting line and second ends of the pixel electrodes are connected to a second connecting line, 68.

APA discloses in Figures 7A and 7B (more clear illustration than Figure 8 in these regards, Figure 8 is objected to above) that the scan line, 2 (gate line), is conventionally formed on the substrate, 1A, and that the reference signal line, 4 (common line), and the reference electrode, 14 (common electrode), are also formed on the same substrate (Applicant's wherein the common electrode is formed on the substrate like the gate line) and a are covered by a first insulating film, 11 (gate-insulating layer).

Jeon teaches, in Figures 2A-2E, an in-plane switching LCD device comprising: a gate line, 32a, on a first substrate; a data line, 35, on the first substrate, the data line being perpendicular (as illustrated) to the gate line; a common line, 32b-1, on the first substrate, the common line being parallel (as illustrated) with the gate line and being formed of a metal (Applicant's first material, Cr for both gate line and common line; col. 2, lines 49-58, especially lines 55-58) (Applicant's wherein the common electrode is formed on the substrate like the gate line); a pixel electrode, 37, (ITO; col. 3, lines 18-22) and the common electrode, 31, (ITO; col. 2, lines 64-67) being formed of a transparent conductive material (ITO, Applicant's second material different from the first material); and a liquid crystal layer between the first and second substrates (inherent to comprising a LCD device) made by a method that simplifies the process by reducing the mask number [considered to meet Applicant's newly added limitations in so far as possible per Figure 13].

FIG. 2E

Wakagi teaches common electrodes having finger portions arranged in parallel to provide adequate lateral spacing between common electrodes and pixel electrodes to improve aperture ratio [col. 5, lines 31-44] for better display performance.

Ando teaches [col. 6, line 29 through col. 8, line 46] a storage capacitor, 105 (Applicants storage electrode), over the common line, 101, and between the pixel electrode and the first substrate, wherein the storage capacitor contacts the second connecting line, 106, via a contact hole per Figures 1 and 2 in order to comprise his invention for an in-plane switched LCD with improved aperture ratio [abstract].

FIG. 1

FIG. 2

Jeon also discloses a device further comprising: a first ITO layer (Figures 2A-2C and col. 2, lines 49-52) (Applicant's auxiliary common line) on the first substrate (col. 2, lines 49-67, especially lines 55-58), the auxiliary common line being connected with the

Art Unit: 2871

common electrode, 31, on the same layer as the gate electrode (formed during same process steps, col. 2, lines 55-58). The first ITO layer of Jeon exists everywhere under the first metal layer of Jeon, forming Applicant's auxiliary lines, it is the same ITO layer that forms the common electrode, and the portion of the ITO layer that is under the common line is connected to the portion of the ITO layer that serves as the common electrode.

However, no prior art with proper motivation to combine was found to teach the device structure as claimed.

Dependent claims are allowable due to their proper dependence upon an allowed claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
